

ABLOY® 110x36KSS-F-CE SYMMETRICAL HINGE FOR NON-REBATED EXTERIOR DOORS

Height adjustment ± 3 mm, side adjustment ± 3 mm

Lifting the door

- Loosen the upper adjustment screws on all hinges (1) a couple of turns.
- Tighten the lower adjustment screw (2) as much as needed (one turn raises the door by 1.25 mm).
- Tighten the lower adjustment screws (2) in other hinges so that they all support the door.
- Finish the adjustment by turning the upper adjustment screws (1) in.

Tools needed: hexagonal key AV5

Side adjustment

Increasing the door clearance on the hinge side

- First loosen the fixing screws and the burglary protection screw (3) on the two lowest hinges a couple of turns.
- Adjust then the hinges by turning the adjustment screws (4) clockwise as many turns as needed. (One turn moves the door approx. 2 mm towards the lock side).
- Tighten the fixing screws and the burglary protection screw (3).
- If needed, repeat the adjustment actions on the highest hinge.

Tools needed: hexagonal key AV4 and TORX T20

Technical data
